Little Sun Solar Charger 44 Empowers Digital-health

Little Sun

How does solar power save lives ?

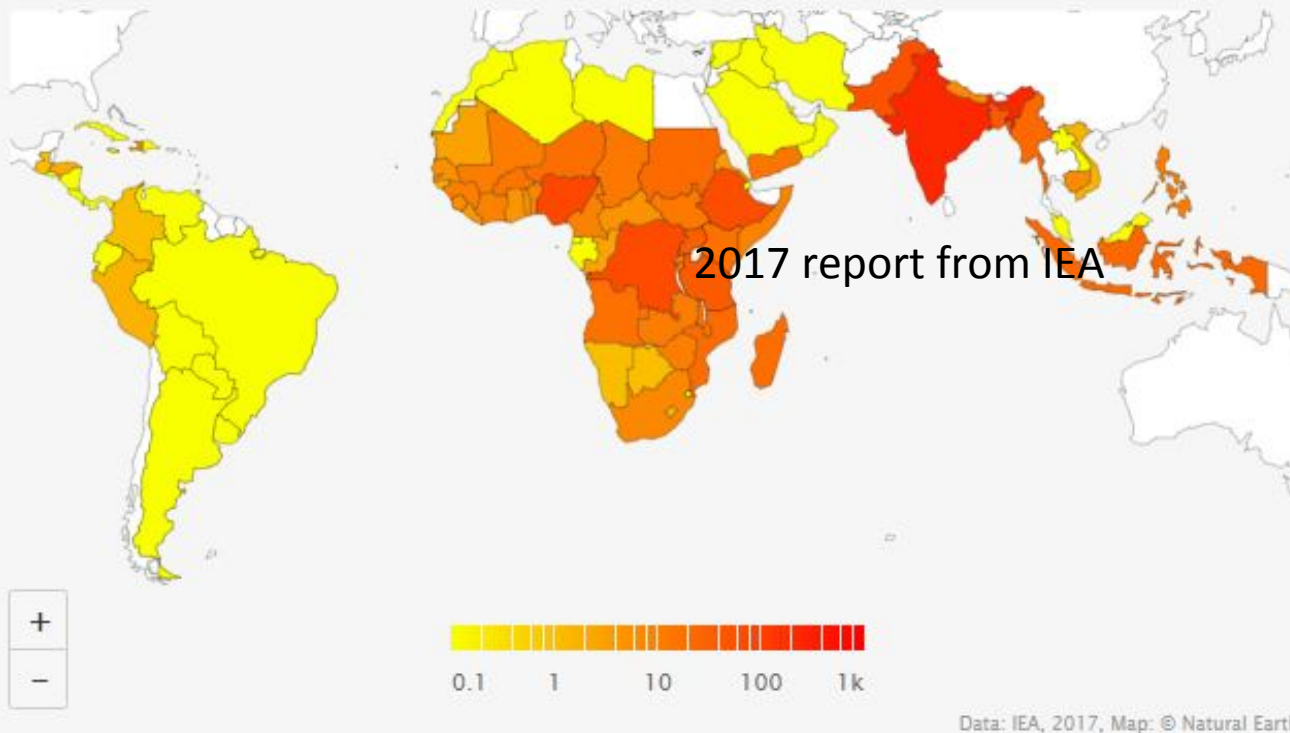

Bringing tighter Digital health and solar energy in Zanzibar-

In rural areas of Zanzibar, much like in most of Sub-Saharan Africa, lacking electricity makes healthcare more complicated. Almost half of Zanzibari women deliver their children at home due to lack of money for transport, traditional practices, and/or lack of planning. Community Health Volunteers have therefore been deployed to help pregnant women overcome these barriers and provide advice around key health topics. Using a mobile health app, over 400 Community Health Volunteers can help pregnant women better plan for facility deliveries as well as pre and post-delivery care.

We provided Little Sun Charges to those Health Volunteers who are not connected to the grid. 40% of Community Health Volunteers do not have electricity in their homes. Little Sun Charges not only help the Health Volunteers in their work with clients, but also help their own families – the chargers help their children study at night thanks to the integrated light. D-tree is expanding their program in order to support all 1.5 million Zanzibaris with better health care.

11000000000 million people living with out access to electricity and demand out striping supply

Population without access to electricity, 2016 (millions)

2017
report
from IEA

Meet our products: Little Sun Original and Little Sun Charge

Little Sun Original

A high-quality portable solar lamp
5 hours of charging = 4 hours at the brightest
Battery lifespan of 5 years

Little Sun Charge

A high-performance solar charger with 4400 mAh,
7.5 hours in the sun full charge
USB port smart phone charge bright light
