

# Electronic health management information systems (eMIS) - A digital health innovation for primary level care in Bangladesh

Jamil Anwar Zaman\*, Sabah Mugab, Arafat Hasan, Shumona Shafinaz, Joby George, Iftekhar Rashid

# Ministry of Health and Family Welfare (MOHFW) of Bangladesh's Facilities at Different Administrative Level

**Total Population: ~165 Million, Rural: 64.3%**  
**E-MIS Coverage: 9 District, 19 Million**

## **Community System**

**Community Health Worker's (CHW) Register:**  
**Family Welfare Assistant (FWA)**  
**Health Assistant (HA) – EPI + IPC**

**E-supervision system for CHW's Supervisors:**  
**Family Planning Inspector (FPI)**  
**Health Inspector (HI, AHI)**

## **Facility System**

**UH&FWC is Primary Level Health Care Facility**  
**Population Coverage: 25,000 – 30,000**

**Family Welfare Visitor (FWV)**  
**Sub-Assistant Community Medical Officer (SACMO) Uses E-MIS e-registers**

# Background of eMIS Initiative

## Issues:

- Inability to **track patient** along continuum of care
- Reporting **delay, slow** and **error-prone** extraction of information.
- **Lack of Synchronization** between program strategy and information system e.g Data is not being used in planning.

Union level health facility UH&FWC

Registers used after UH&FWC

## Solution:

- The paper registers are **simplified** and **combined** for better record keeping and patient tracking.
- Appropriate indicators are incorporated into registers
- **Digitalization** of registers ensures **accurate real time** information for **evidence-based planning** and **performance monitoring**.

# eMIS aligned with Digital Health Intervention v1.0 (WHO)

A shared language to describe the uses of digital technology for health

Data Exchange

# eMIS for Healthcare Providers

- Client unique identity
- Manage client's clinical
- Provide prompts and a based according to protocol
- Longitudinal tracking of clients' health status and services
- Screen clients by risk or other health status
- Schedule healthcare provider's activities

Pregnant Woman with High BP Jan'18 Mar'18

# eMIS Data Services

- Non routine data collection and management
- Data visualization
- Automated analysis to generate new information
- Map location of clients and household
- Map location of facilities and care providers
- Data exchange with other health systems e.g . DHIS2, SCMP

# eMIS Results: Increased Referral of pregnant women detected with high BP and Pre-eclampsia

- According to the national guideline of Bangladesh, at the primary level facilities (UH&FWC), after 20 week of pregnancy
  - Diastolic pressure 90 or above requires referral to secondary level facility for **Gestational Hypertension**
  - Diastolic pressure 90 or above + Presence of Albumin in urine requires referral to CEmOC facility for **Pre-Eclampsia**

N1 = 12,549 (Nov'16 - Jan'17)

N2 = 15,392 (Jun'17 - Aug'17)

N3 = 15,275 (Jun'18 - Aug'18)

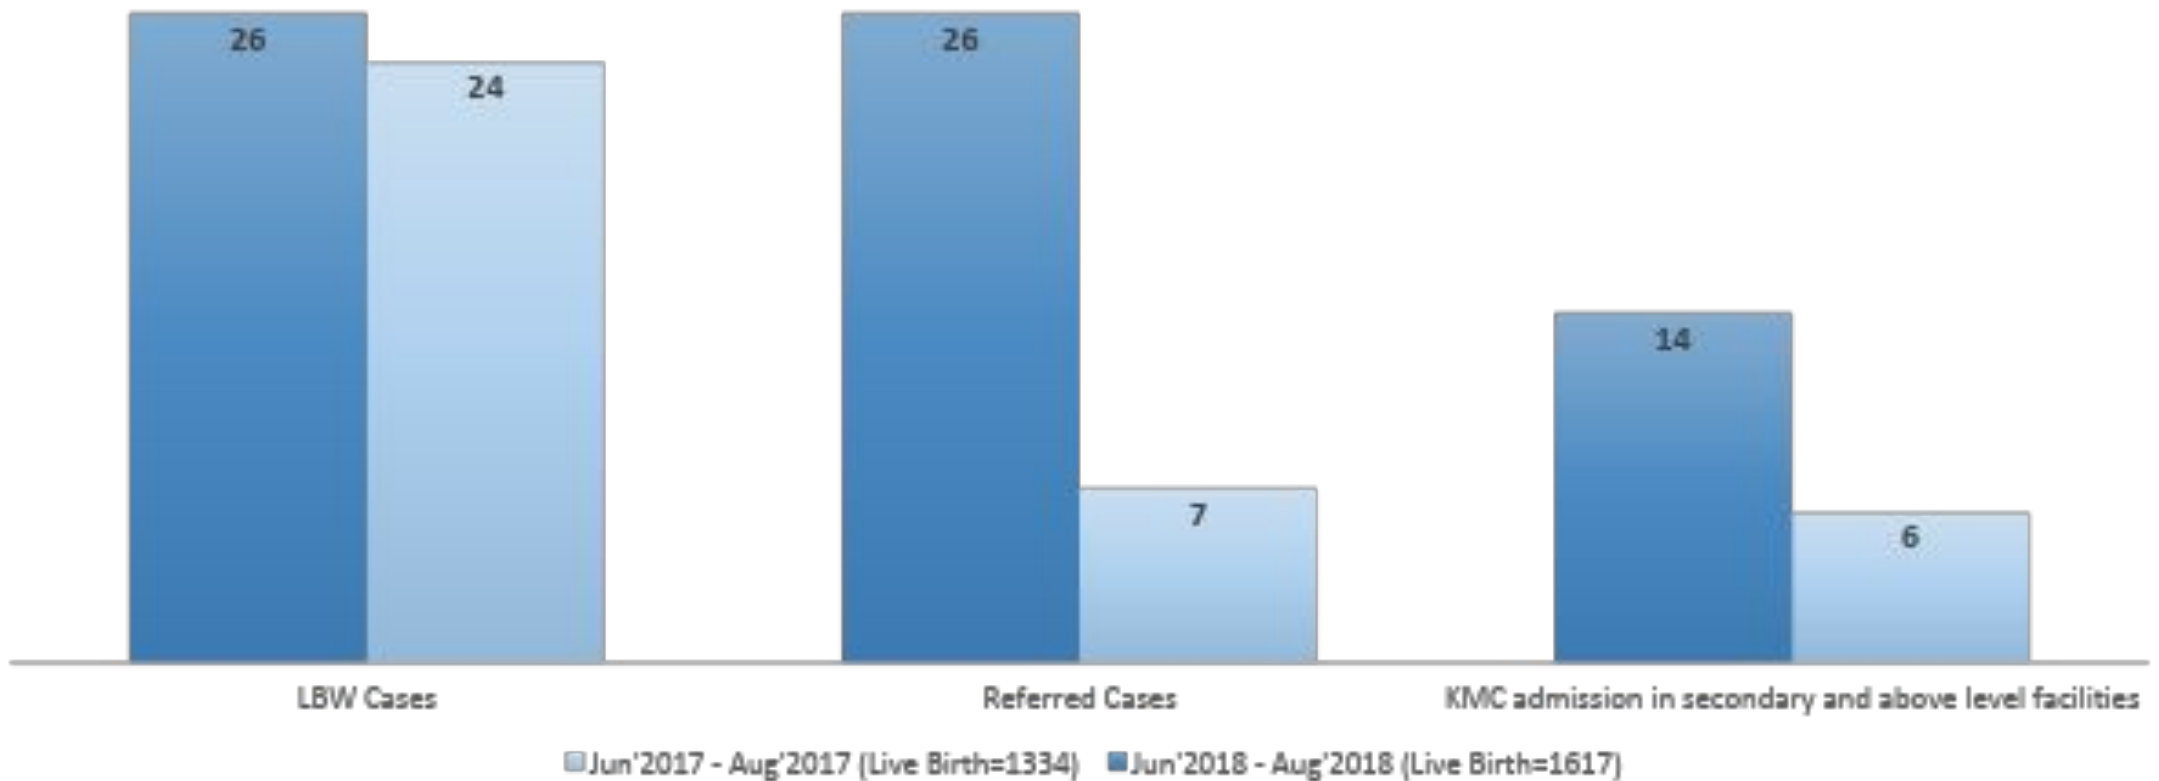

67 UH&FWCs

E-MIS automated Decision Support System (DSS)

Operational from Jun'17

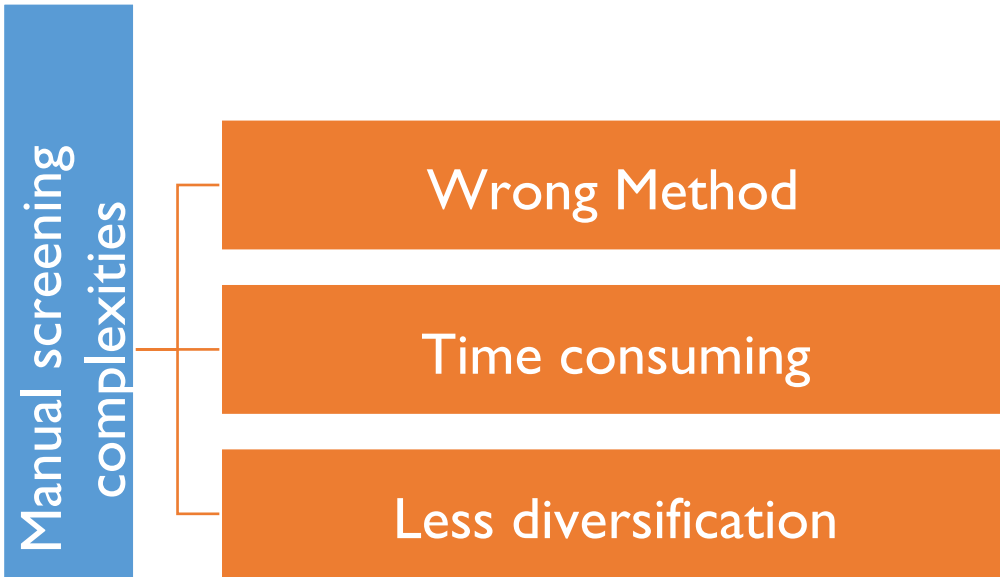

# eMIS Results: Increased newborn referral for low birth weight cases

eMIS automated Decision Support System (DSS) for Premature/LBW operational from June 2018

# Automated screening tool following MEC reduces manual decision making complexities

# Way Forward

---

- Government of Bangladesh scaling up the initiative in two divisions
- By 2019 coverage will reach 40 districts with population coverage of 75 Million
- Linkage with other health system initiative like HRIS, Asset Management

**THANK YOU**

MEDIC  
MOBILE™

# Using digital tools to improve the referral coordination process between the community and health facility in rural Kenya

Maryanne Mureithi, Senior Service Designer

December 11<sup>th</sup>, 2018

## Medic Mobile

We build world-class software for health workers providing care in the hardest-to-reach communities. We believe that health impact can be accelerated through the use of technology.

# Designed for Integrated Care

## Medic Mobile supports:

- Client Registration & Enrollment
- Care Coordination
- Decision Support
- Activity Planning & Scheduling
- Referral Coordination
- Performance Management
- Community Event Reporting
- Risk Profiling
- Predictive Analytics

## In these health areas:

- Family Planning
- Antenatal Care
- Postnatal Care
- Immunization
- Nurturing Care
- iCCM
- Nutrition
- TB and HIV
- CBDS/ EBS

**Key Metrics**

Pregnancies  
Supported

# Community Health Innovation Network

Medic Mobile has partnered with Living Goods to leverage emerging technologies to integrate community health care with health facilities and to extend the reach of high quality diagnostic technologies to global patients at the community level.

**Case study:** Closed loop for referrals

# The importance of referrals

- Cases are often high priority
- Time-sensitive
- Patients who do not complete a referral may receive little or no follow up from the CHV
- Closing the loop is important as a matter of health equity

## WHO Digital health interventions classification

### 2.6: Referral coordination

Serial No. **2301**

  
**MINISTRY OF HEALTH**  
**CHW's Referral Form**

<i>Section A (Client's data)</i>	
Name of patient/Client _____	
Sex: <input type="checkbox"/> Child <input type="checkbox"/> Adult	Date _____
<input type="checkbox"/> Male <input type="checkbox"/> Female	Age _____
Name of Community Unit (CU) _____	
Name of Link Health facility for the CU _____	
<i>Section B (Reason for referral)</i>	
<input type="checkbox"/> Reproductive <input type="checkbox"/> Child <input type="checkbox"/> TB <input type="checkbox"/> HIV/AIDS <input type="checkbox"/> Others	
Main Problem _____	
Treatment Given _____	
Referred to _____	
Comments _____	
<i>Section C (CHW referring)</i>	
Name of CHW _____	
Signature _____	
<i>Section D (Receiving officer)</i>	
Name of the receiving officer _____	
Profession _____	

## Referral pain points

- Inadequate communication between health workers
- Lack of referral tools
- Loss of referral tools
- Self reported data; unreliable
- Patient experiences; long queues

## Design Challenge

How might we leverage technology to close the loop for existing referrals?

# Human Centered Design Phases

## 1. DISCOVER

Ask questions, be inclusive, listen, learn a lot

## 2. DEFINE

Prioritize needs, refine the problem statement, focus in on key requirements

## 3. IDEATE

Brainstorm a range of ideas to meet user needs

## 4. PROTOTYPE

Build and test scrappy prototypes to quickly validate ideas

## 5. TEST

Get feedback from users

DEPLOY

## 7. LEARN

Measure impact, observe user behavior; allow the solution to evolve over time.

## 6. ITERATE

Synthesize learnings, refine solution.

# The MVP for CHWs

- Digitised referral forms and recommendations
- Referrals trigger tasks at the facility
- SMS notification sent to CHW once a nurse confirms the referral at facility
- CHW in-app targets will include widgets for referral confirmation rate
- Follow-up tasks are sent to CHW
- The CHW can continue to do their daily work offline

 **Pregnancy Visit**

Be sure you Submit to complete this action.

 **Pregnancy Details**

**Dianna**  
21 years old  
Mangere Community Unit  
Link Facility: *Gucha*

 **Refer to a health facility**

We recommend referral to Gucha. Does the patient want to be referred to Gucha?

☐ Yes

☐ No

**Referral comments**

# The MVP for Nurses

- Tasks generated to indicate patient in need of referral
- Nurses can complete referral tasks at point-of-care or at a later time
- Nurse can include instructions for patient care which can be sent to the CHW via SMS
- Facility staff can report if patient visited the health facility but did not receive care
- The nurse can work offline

 **Counter Referral**

**Referral confirmation**

**Date when the patient visited the health facility \***

**Action taken. \***

☐ Patient was treated

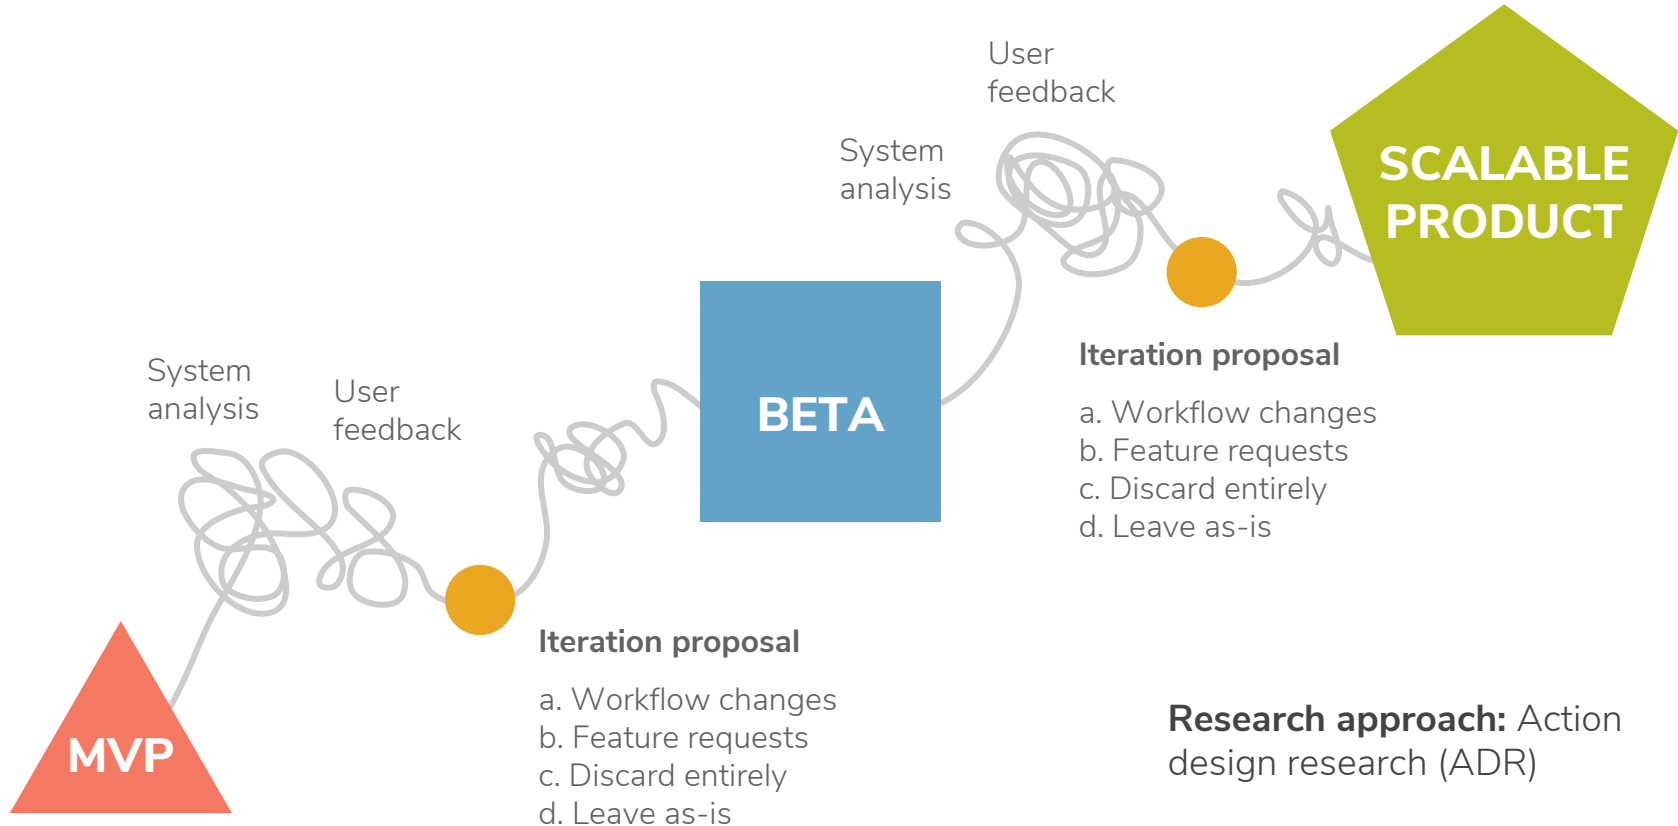

☐ Patient not treated

**Comments for CHV**

*Please add any additional instructions that you would wish to send to the CHV*

**Next >**

# From an MVP to a scalable product

## Early learnings

- Health workers are enthusiastic about the tool
- Digital intervention is working as expected
- Communication among health workers has improved
- Internet connection continues to be a challenge
- Optimizing the app performance for facility users

*“I’d like to receive feedback when a CHW conducts follow up.” -Nurse*

*“The App guides us when filling the MOH 100 hard copies.” -CHW*

*“We now take referrals very seriously.” -CHW*

## How we have kept the health workers engaged

- Involved in the design process
- Easy access to records and data for monthly reporting
- Indicators that they track on dashboards
- Improved communication among health workers

MEDIC
