

Strengthening Community Based Nutrition Programs with Mobile Technology

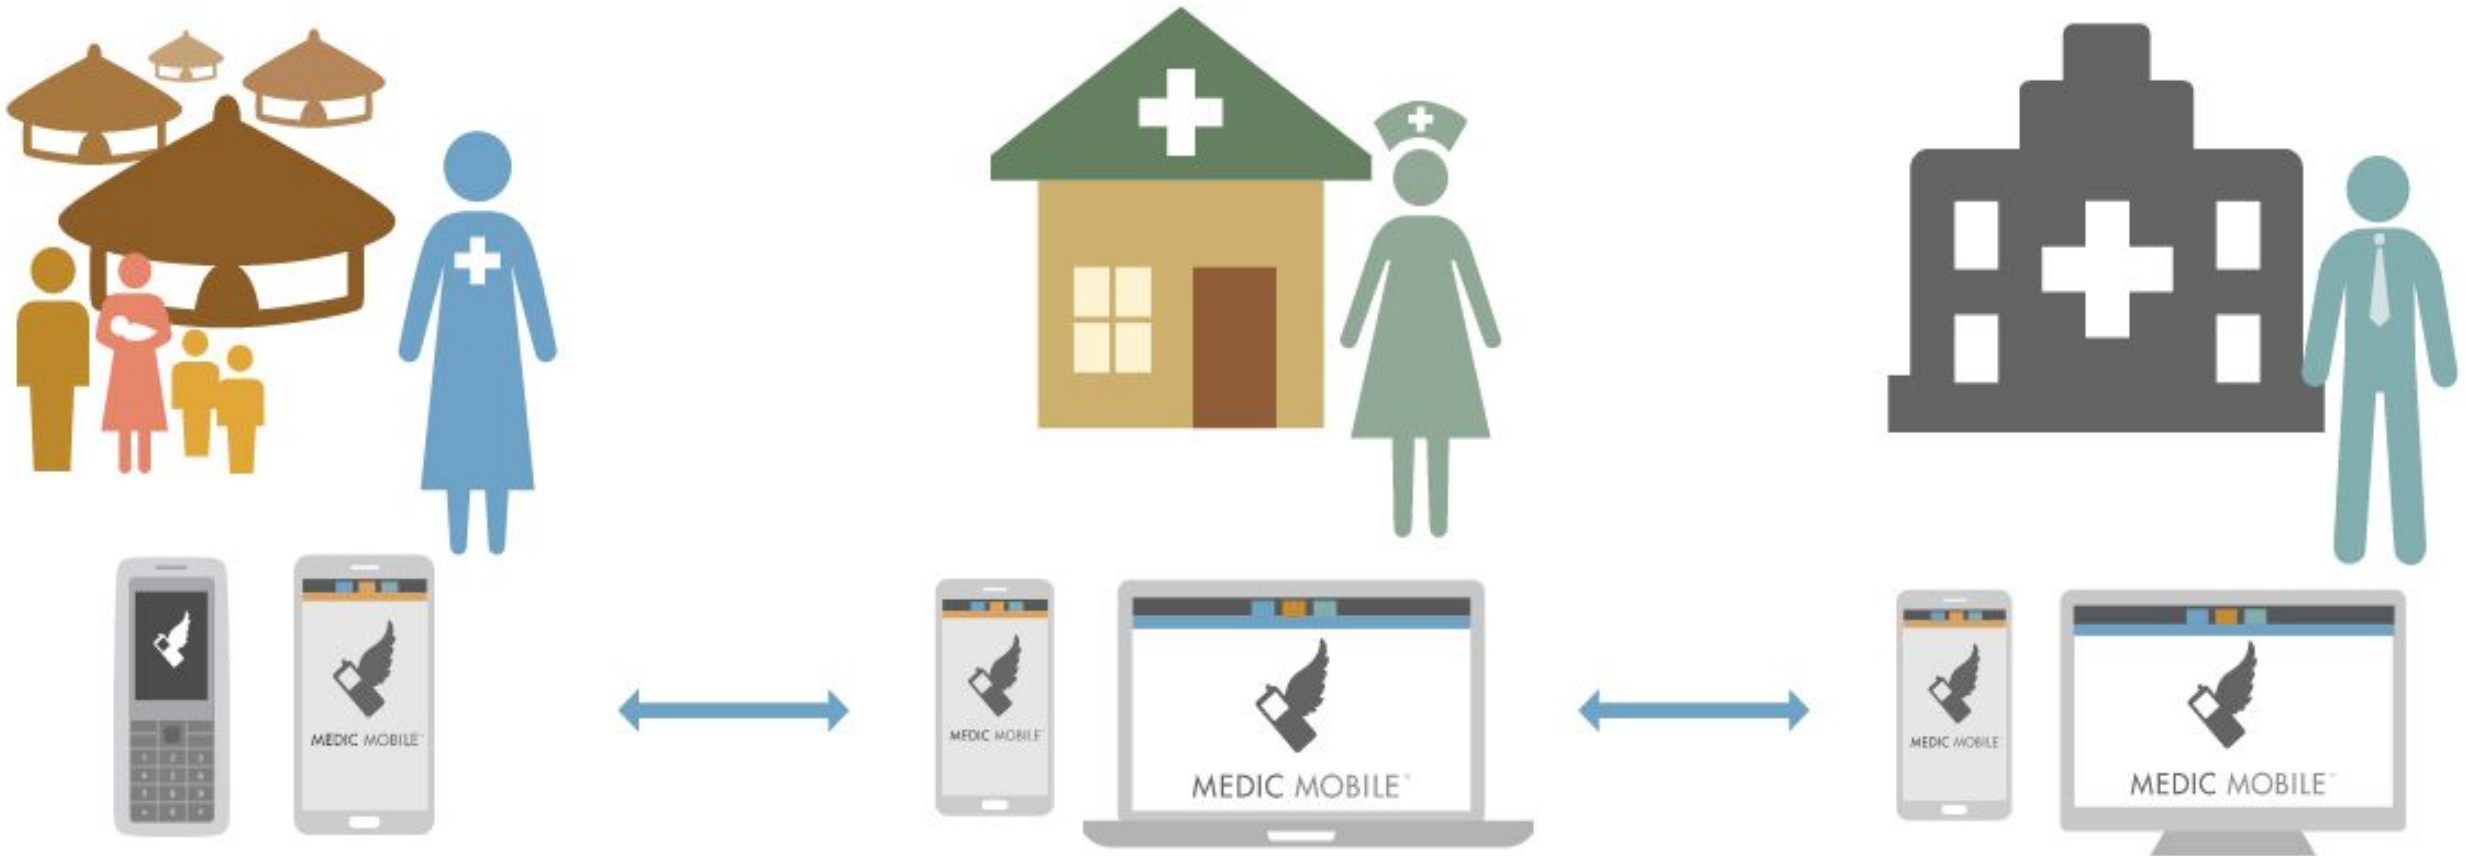

14,000 frontline health workers serving 8 million people

55 partners in 23 countries

Connected health systems that save life with mobile technology

Behavior change communication:
Health Promotion empowers families
to take control of their health.

Screening and case-finding

*CHWs proactively identify at-risk and malnourished kids during households visits for growth and health monitoring

*Assessments of children's WAZ, HAZ, WHZ and MUAC and provide decision-making support for counseling, referral, and treatment.

Patient tracing

Notification of
upcoming clinic
appointments
micronutrient and
medicine
distribution dates,
reducing defaulter
rates and ensuring
that families have
everything they need
to stay healthy

Service and stock monitoring

*Real-time data on service statistics and supply of food supplements and micronutrients can strengthen service delivery.

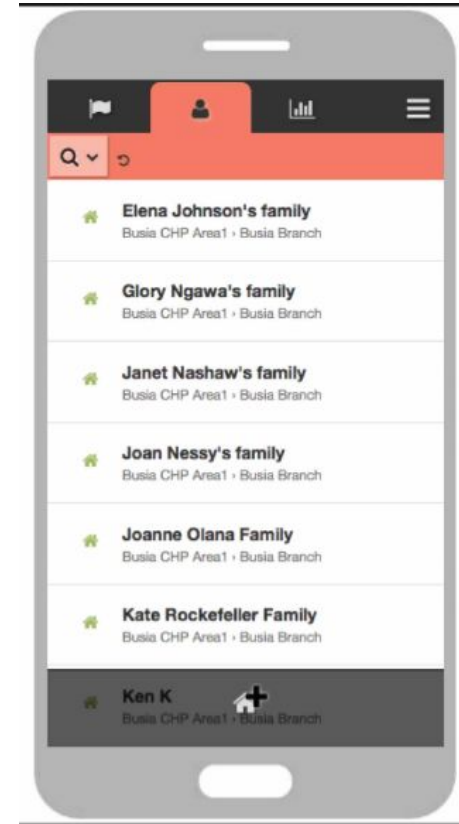

*Easy-to-read dashboards that provide information to managers for restocking & improved forecasting to meet future demands.

Looking ahead: Stakeholders invest more on CHW programs

Health Workers Adopt Smart Technologies

Health Worker Managers Use Smart Technology to Support Decision Making process

A wide-angle photograph of a rural village scene. In the foreground, two small, rectangular houses built from dark, rough-hewn stone or mud-brick stand on a dirt path. Both houses have corrugated metal roofs that appear weathered and rusty. The house on the left has a dark doorway, and a small wooden bench sits on the ground nearby. The house on the right also has a dark doorway and a similar bench. Between the houses and in the background, there are lush green trees and bushes. In the far distance, a range of rolling hills and mountains is visible under a sky filled with heavy, grey clouds. The overall atmosphere is one of a remote, rural setting.

We are all
health workers
