A group of people are gathered around a table, focused on a tablet and some papers. A man in a light-colored shirt is pointing at the tablet screen, while a woman in a blue top looks on. Another man in a dark shirt is also looking at the tablet. The background shows a workshop or office setting with blue shelving and various items. The word "SCOPE" is overlaid in the center in a large, dark blue font.

SCOPE

A photograph of two women in traditional Indian clothing. The woman on the left wears a green and gold sari and glasses. The woman on the right wears an orange and white sari and is looking at a smartphone. The word "SCALE" is overlaid in the center.

Test Report

NO. 123456789
Date: 10/10/2023
Time: 10:00 AM
Location: 123456789

Sample No.	Test Name	Result	Unit
1	Test 1	100	mg/dL
2	Test 2	200	mg/dL
3	Test 3	300	mg/dL
4	Test 4	400	mg/dL
5	Test 5	500	mg/dL
6	Test 6	600	mg/dL
7	Test 7	700	mg/dL
8	Test 8	800	mg/dL
9	Test 9	900	mg/dL
10	Test 10	1000	mg/dL

Thank you

Why is a technically excellent innovation not always enough?

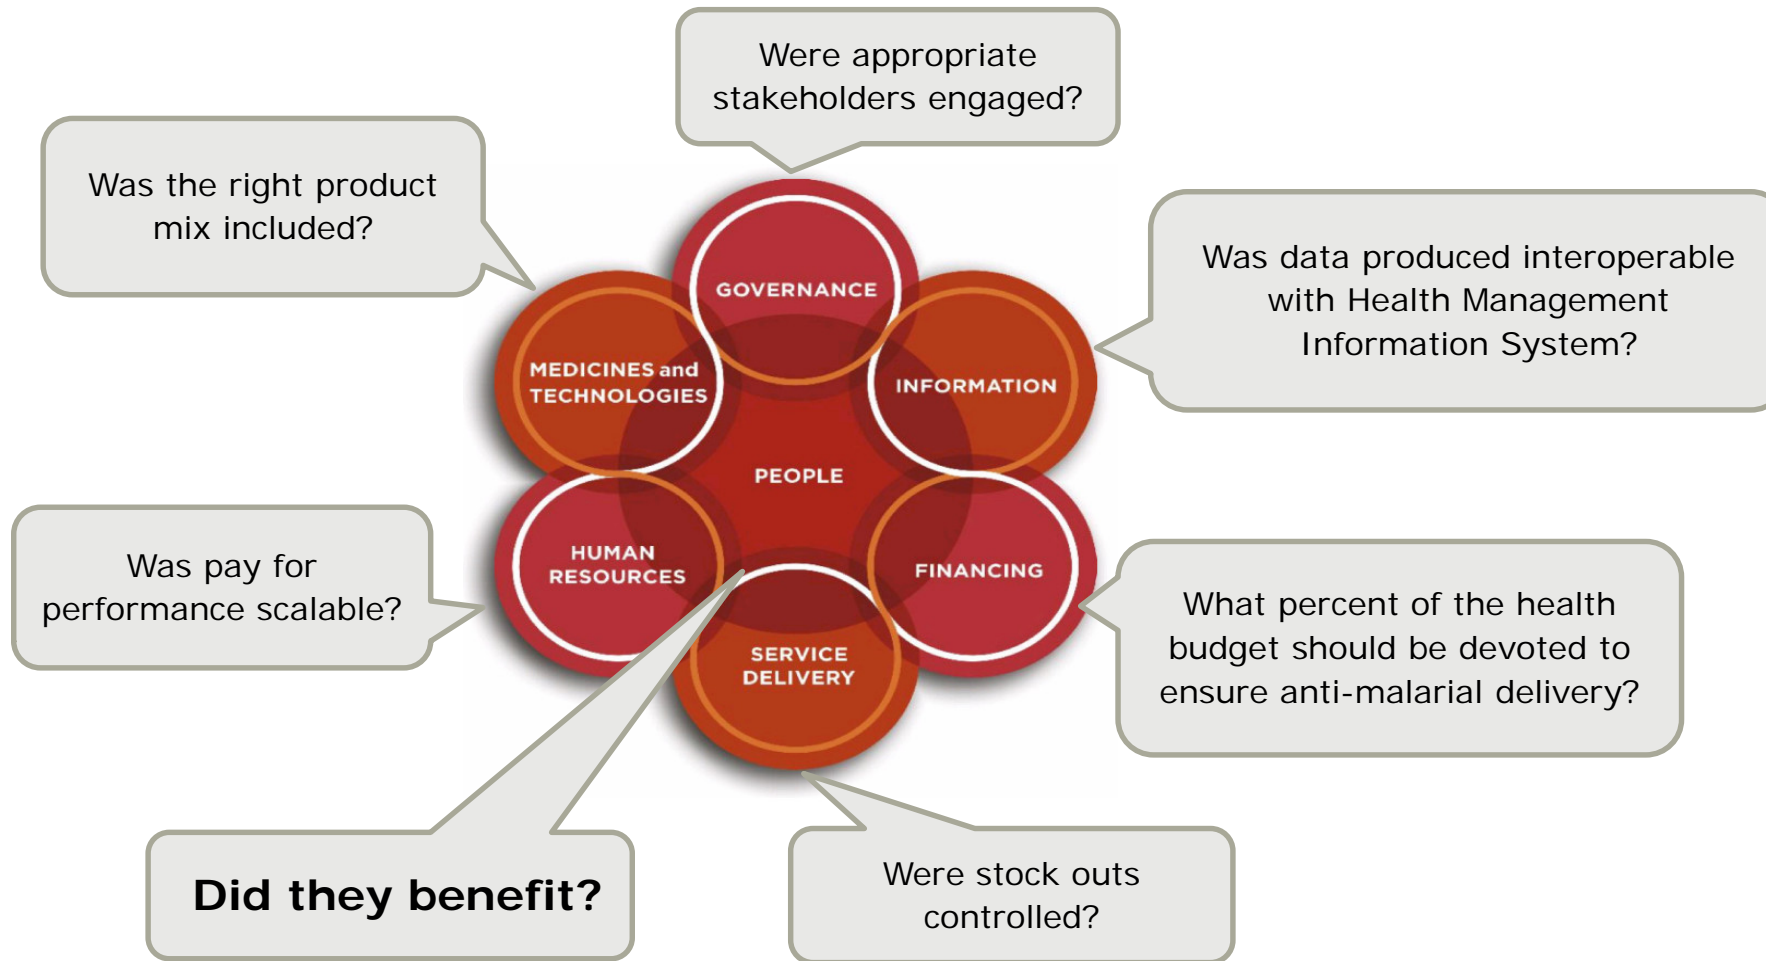

Global Digital Health Forum
10th of December 2018

SMS for Life

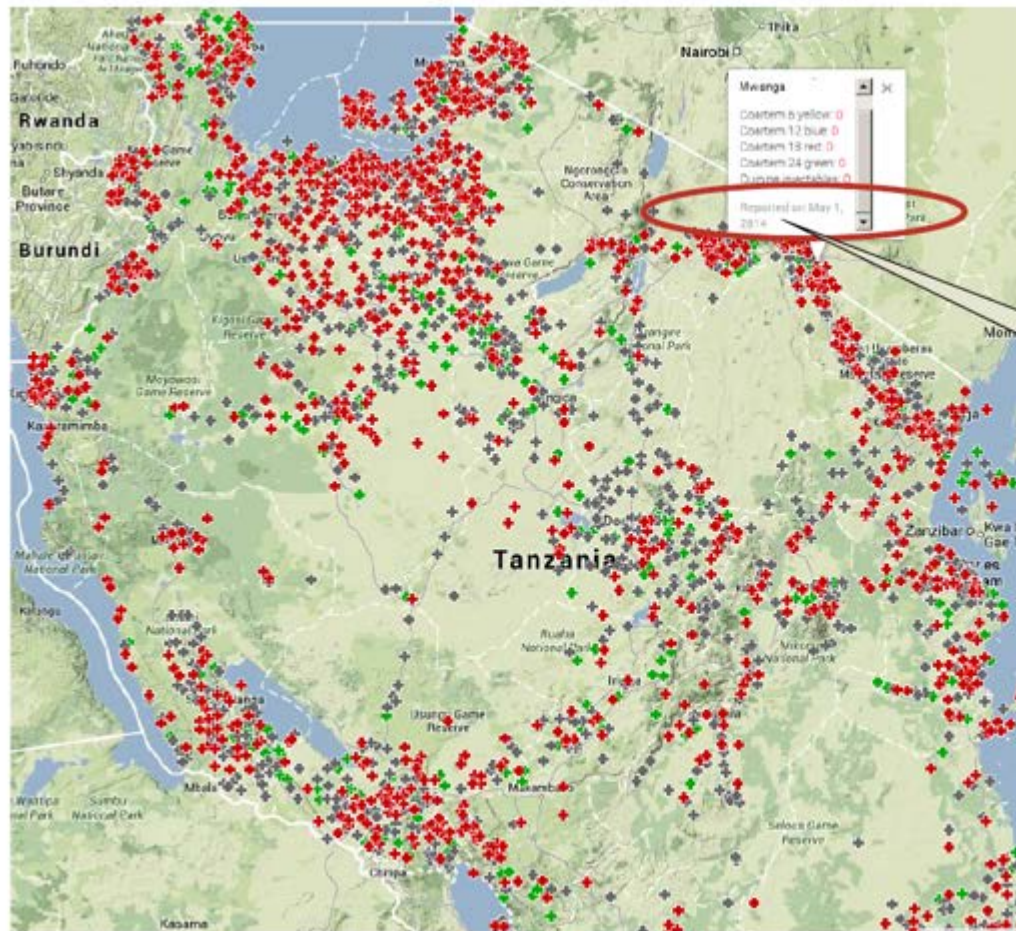

- Real-time monitoring of antimalarial stock-outs using SMS
- Pilot reduced stock outs to almost negligible levels
- National roll out in 2011 to more than 5000 health facilities in Tanzania
- Cancellation without replacement in 2015

Let's look at it from a health system perspective...

1. Scalable and reliable technology

Medicines
&
Technology

Real-time
monitoring

Red if stock-
out this week

Green if stock
in

Grey if no
report yet

Source: SMS for Life Tanzania

2. Surveillance without response

People

Service
Delivery

- ❑ The system was designed to bring visibility to stock outs
 - BUT... **what** should be done in case of stock out?
 - **Who** should take action?

- ❑ Importance to involve the right stakeholders in programme design

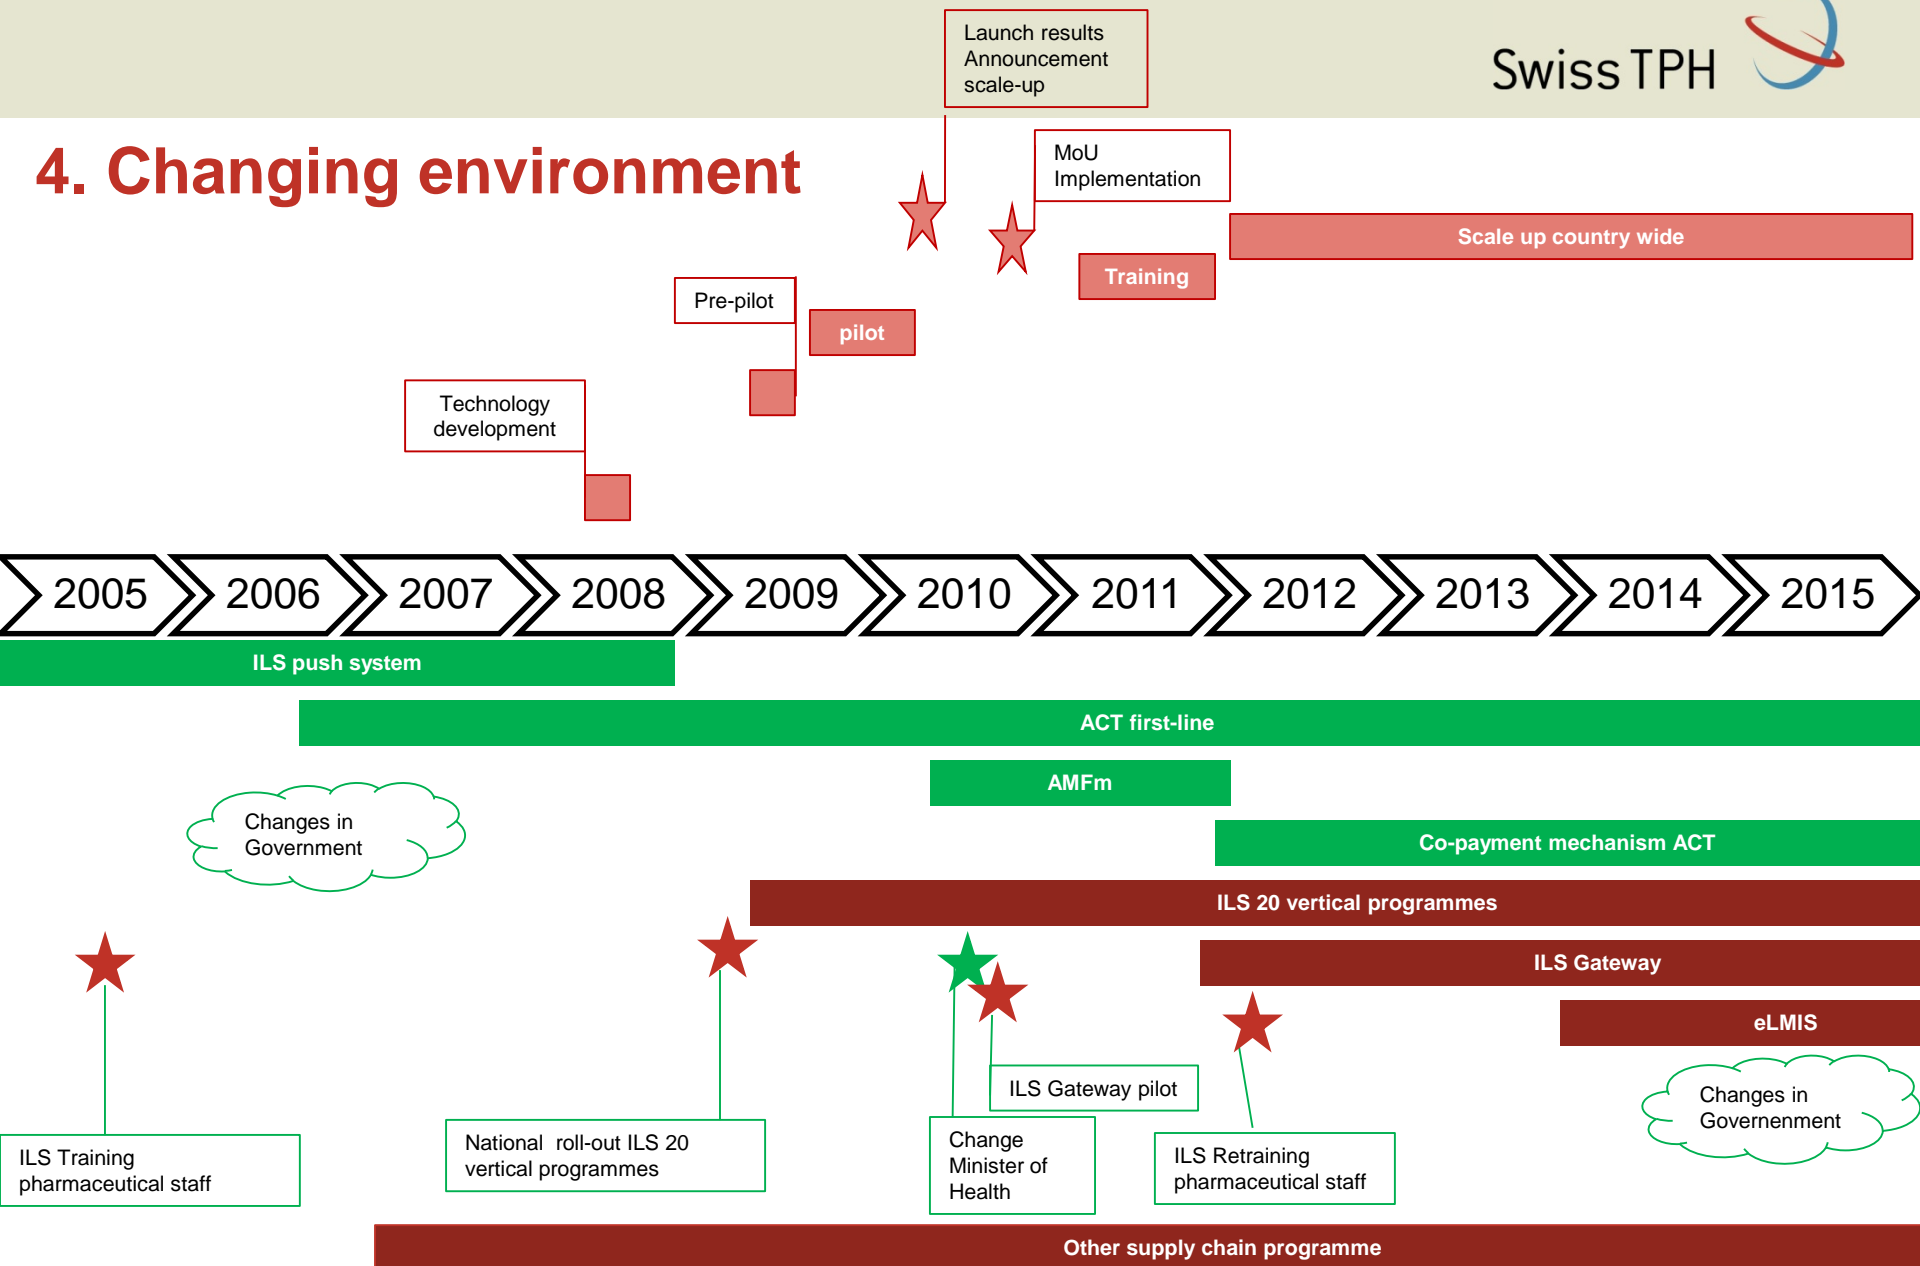

3. Costly intervention

Finance

- ❑ The technology was **inexpensive**
- ❑ However, **the costs at scale** supposed a large burden for the government
 - The government never assumed the costs in its budget

4. Changing environment

Lessons learned

1. A large scale digital intervention was **feasible** and **acceptable** in Tanzania
2. Designing to bring visibility was not enough to reduce stock outs when going to scale
3. A **costing exercise** would have been helpful already during the pilot to address some of the scale up affordability and ownership challenges at scale
4. Need for **agile** technology, as well as programme design and management

THANK YOU!
